

Pragatix AI Adoption Intelligence

Visibility that turns AI into business performance

The Challenge

Companies invest many resources in AI but lack visibility into real adoption and impact.

The Solution

Pragatix AI Adoption Intelligence helps organizations improve AI usage and maximize their investment in AI. The platform provides full visibility and measurement of AI activity across the organization, delivering actionable insights into how employees use AI services—strengthening performance and driving better business outcomes.

Key Features

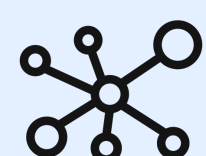

Department / group-level adoption dashboards

AI-driven identification of user intent and usage patterns

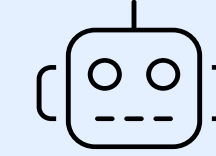

Automatic classification of AI use cases across teams and departments

Visibility into how AI is applied in real business workflows

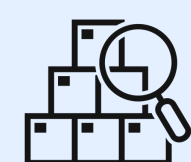

Discovery of successful practices to replicate and scale across the organization

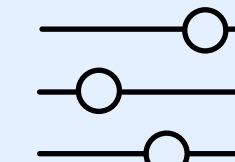

Identification of leading AI services used across the organization (e.g., ChatGPT, Gemini, Copilot, and others)

Measurement of adoption trends over time across teams and roles

Identification of leading users and AI champions across the organization

Detection of users and teams that would benefit from additional training and enablement

Personalized insights for employees and managers

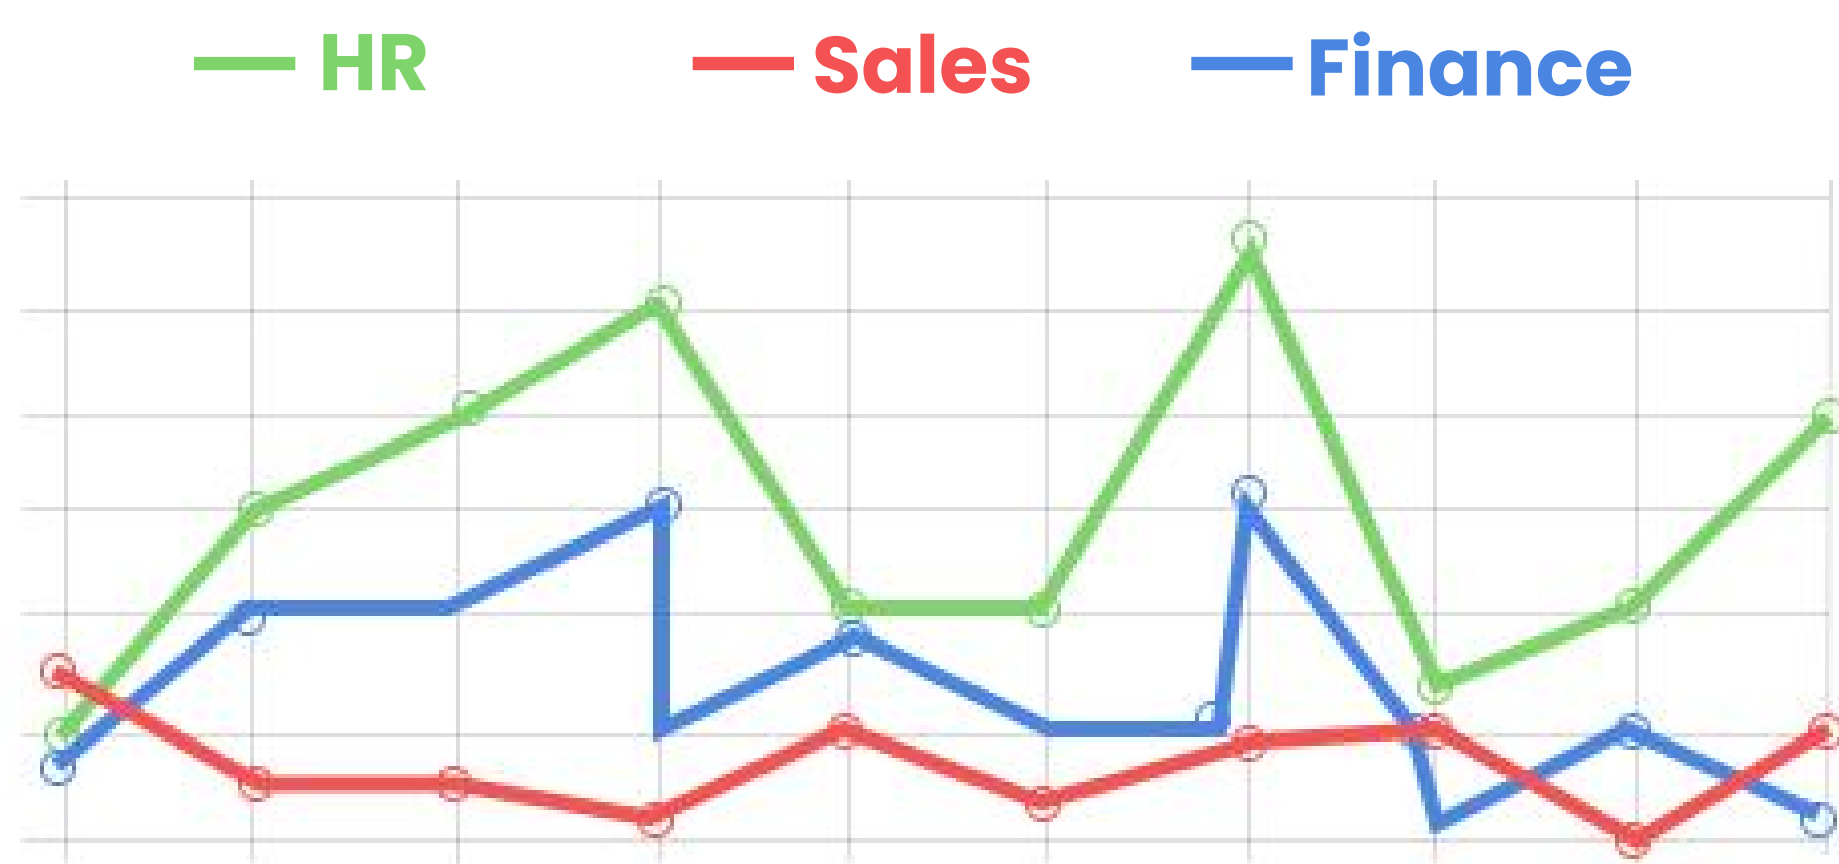

Benchmarked tips and badges based on usage

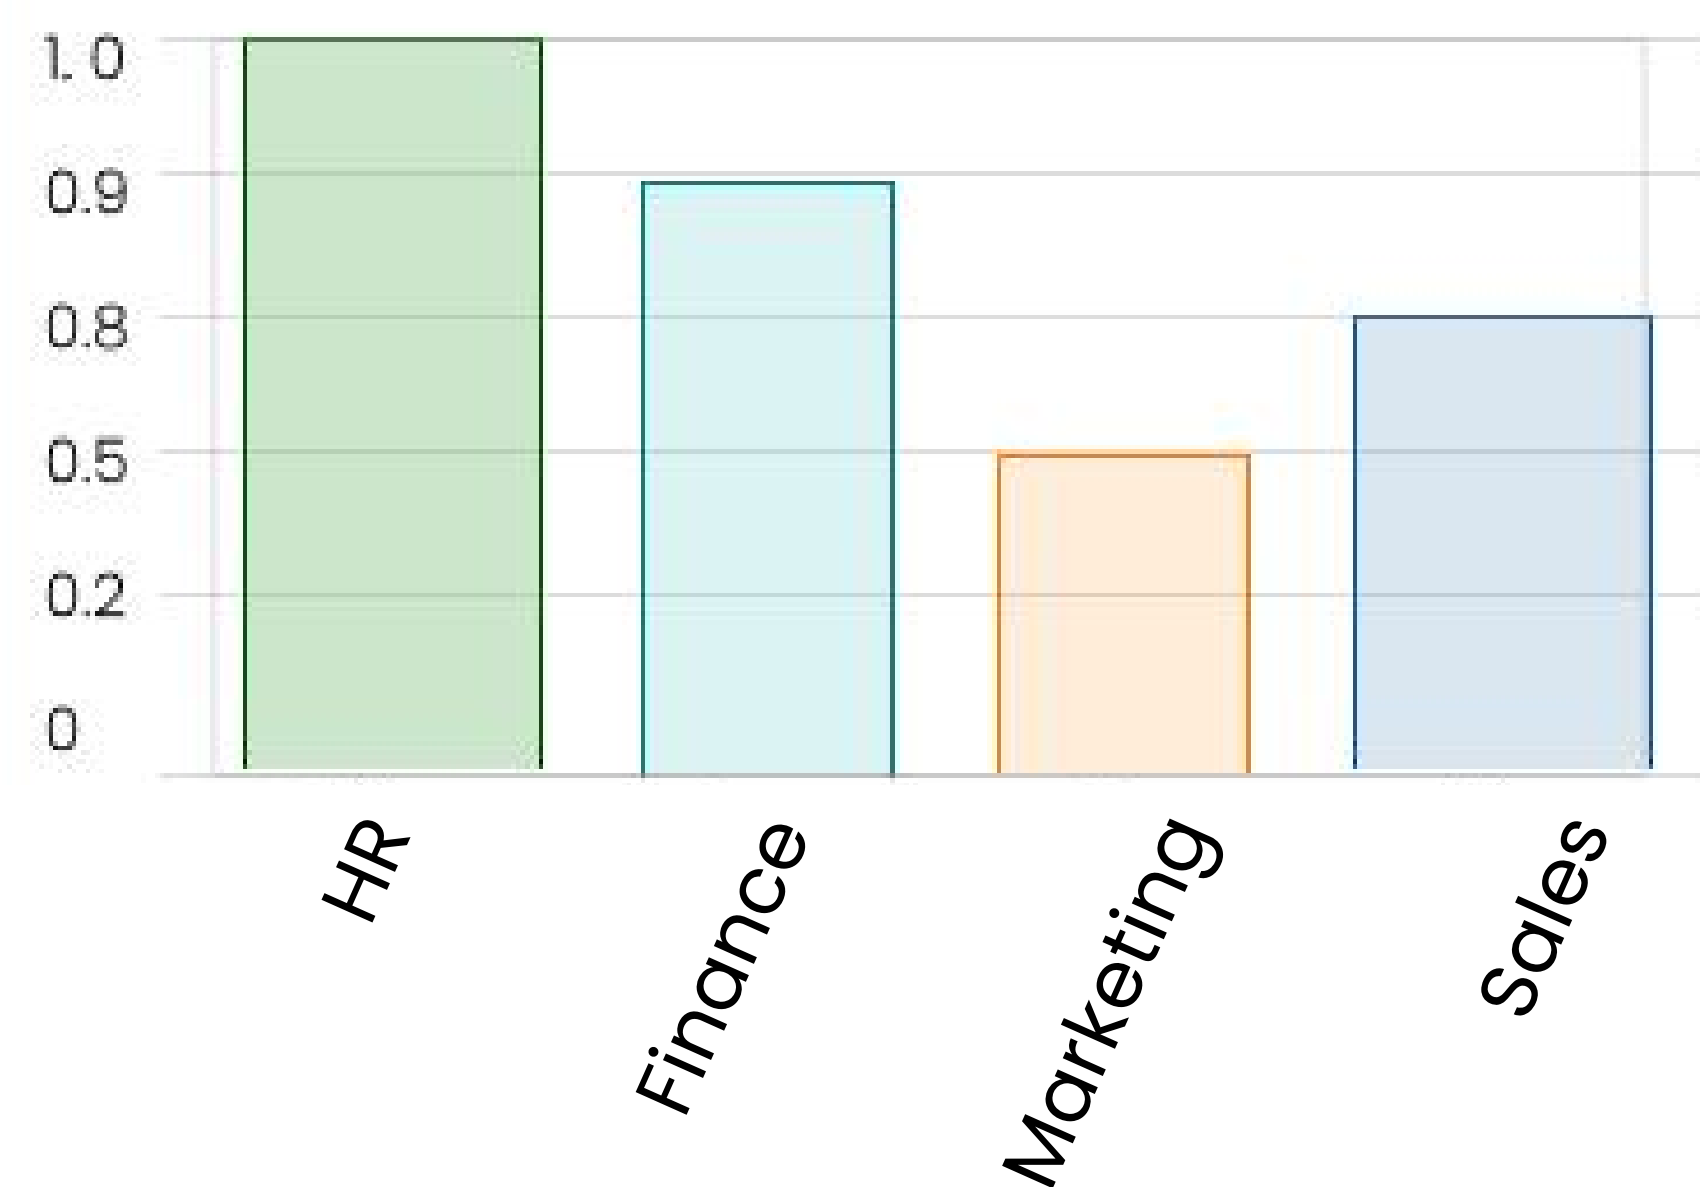

Periodic progress emails

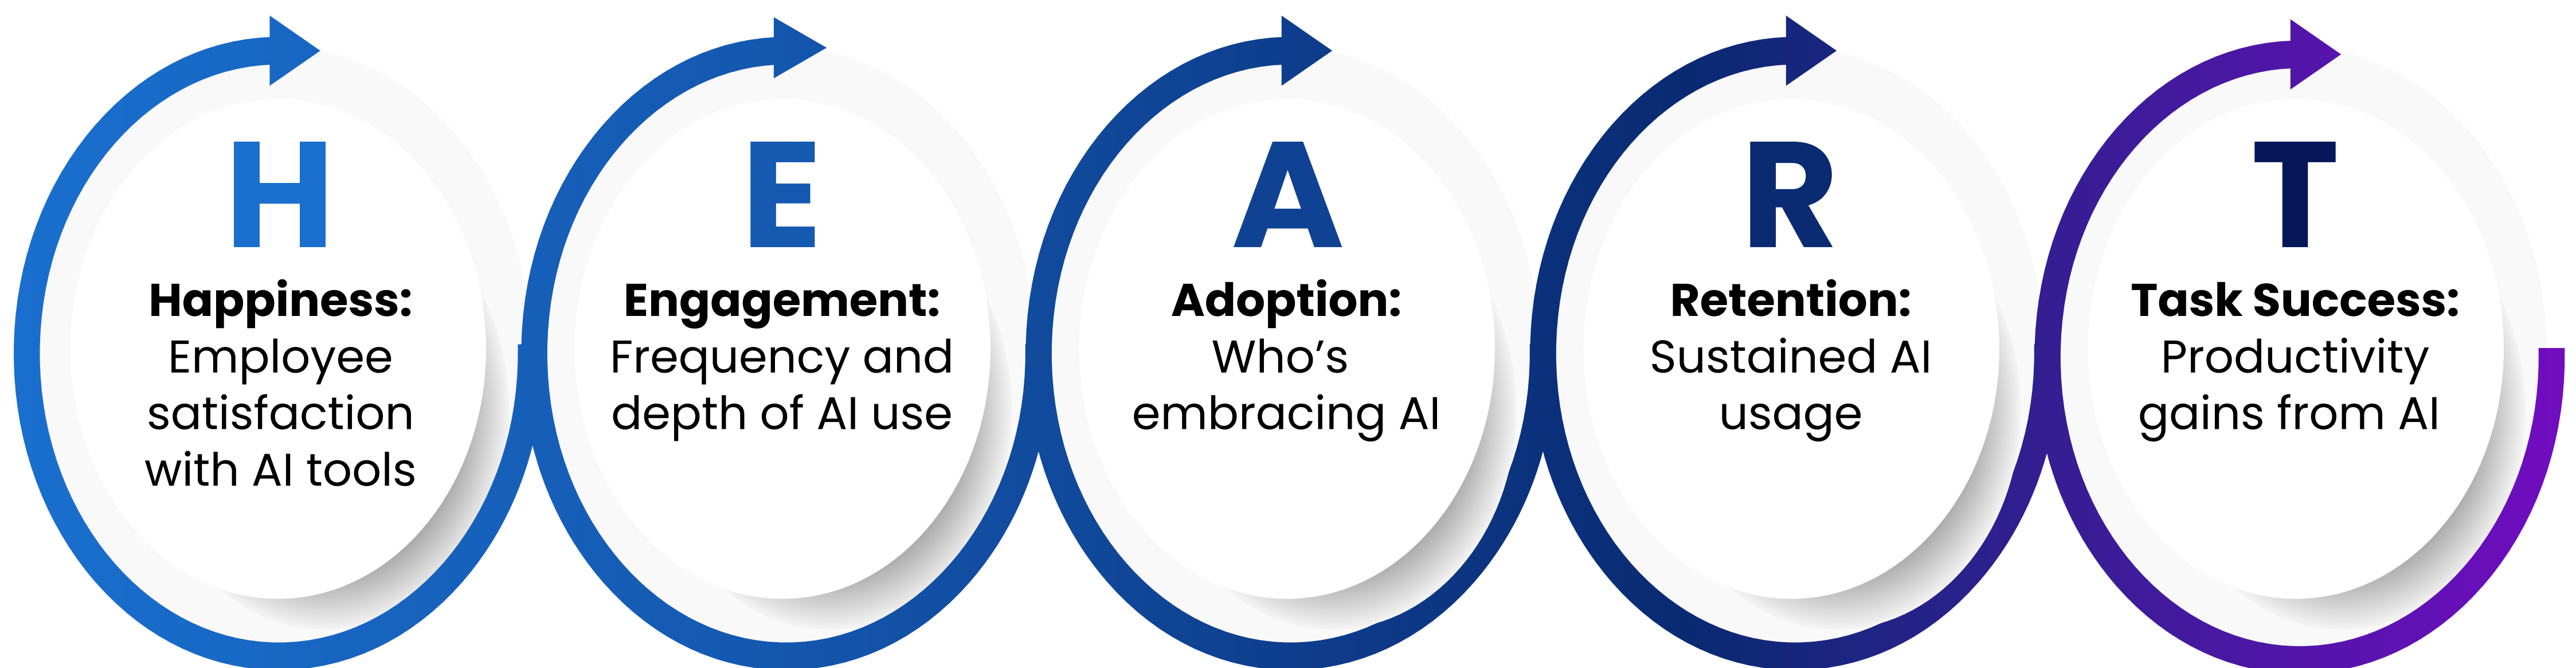

Departments Adoption Trends
